Superior ROE has somewhat priced-in; initiate with Hold

- Solidly positioned in the FMCG retail space, we expect its sales/net profit to grow by 13.3/15.9% yoy in FY23F vs. retailer peers at 13.4/4.9%.
- Fee income shall also continue to post robust growth (15% FY23-25F).
- Its superior ROE to peers may not fully justify its valuation of 38.5x P/E especially with relatively par sales outlook in FY23F. Initiate with HOLD.

Proven winner in the FMCG retail space

AMRT has proven itself to be one of few winners in the FMCG retail space in the current duopoly minimarket industry (the other player is Indomaret). The group has gained market share in the Indonesian FMCG trade (68 FMCG categories) from 11.1% in FY17 to 13.5% in FY21. With an expansion target of >1700 stores in FY23 along with SSSG target of 5%, we expect AMRT's top line to grow 13.3% yoy in FY23F.

Vast networks has allowed AMRT to command higher margin

Given AMRT's limited shelf space and competition within the FMCG space, AMRT has the privilege of selecting the best products to optimize its turnover and generate the highest margin possible, as evidenced by AMRT's growing income from product registration (CAGR of 10.1% in FY15-22F). As a result, the group has been able to grow its gross margin consistently from 19.1% in FY15 to 20.8% in FY22F and we expect it to reach 21.5% by FY25F.

Robust growth from fee-based income

Despite digital services being offered in numerous digital platforms (bank/online marketplaces), we believe that AMRT would continue to play a relevant role in bridging Indonesia's unbanked/underbanked population to the digital platform (e-commerce, etc) as they account for 77% of the population based on Bein. We project fee-based income to grow at CAGR of 15% for FY23-25F, similar to FY20-22F CAGR of 17.0% and this shall boost earnings meaningfully accounting for 20% of FY23F pre-tax income.

Initiate with HOLD with TP of Rp2,600 due to valuation

AMRT has been the top performer in the consumer space as evidenced by its recent strong financial performance (EPS CAGR of 57.7% FY20-22F). Nonetheless, we are forecasting a more conservative net earnings growth outlook in FY23F of 15.9% yoy (vs FY21/22's 86.4/33.4% yoy) as we expect flattish EBIT margin due to normalizing SSSG and higher wage growth in FY23F. With these considerations, we initiate AMRT with a HOLD rating despite generating FY23F 26.0% ROE (vs. retailer peers ex-LPPF at 12.9%) at a target price of Rp2,600 based on 35.1x FY23F P/E (+1 SD above 5Y mean) - a significant premium vs. its local retailers' peers of 12.8x.

Investment Thesis

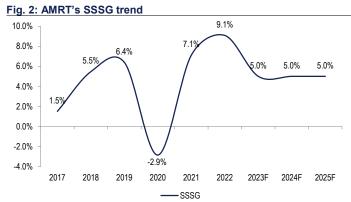

Proven winner in the FMCG retail space

AMRT has proven itself to be one of few winners in the FMCG retail space in the current duopoly minimarket industry. Over the years, AMRT group has gained market share in the overall Indonesian FMCG trade (68 FMCG categories) from 11.1% in FY17 to 13.5% in FY21, with consolidated sales CAGR of 8.4% in FY17-21.

FY22's 9.1% SSSG is driven more by price rather than volume as FMCG companies adjusted their prices aggressively in FY22 (Fig 4), while price adjustment indication in FY23F from FMCG companies is expected to be much more subdued as raw material prices normalize. As such we expect a deceleration in FY23F SSSG to 5%, in-line with company's guidance.

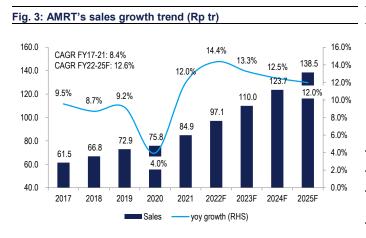

With an expansion target of >1700 stores in FY23 along with SSSG target of 5% (vs FY22's c.1,550 store opening & SSSG of 9.1%), we expect AMRT's top-line to grow 13.3% yoy in FY23F and similar with its retailer peers of 13.4%

Optimizing turnover and margins from picking FMCG bestsellers

Being one of the most dominant FMCG retailers in Indonesia, AMRT enjoys economies of scale and massive bargaining power toward FMCG principals. Given AMRT's limited shelf space and competition within the FMCG space, AMRT has the privilege of selecting the best products to optimize its turnover and generate the highest margin possible, as evidenced by AMRT's growing income from product registration (CAGR of 10.1% in FY15-22F). As a result, the group has been able to grow its gross margin consistently from 19.1% in FY15 to 20.8% in FY22F and we expect it to reach 21.5% by FY25F.

Source: Company, Indo Premier

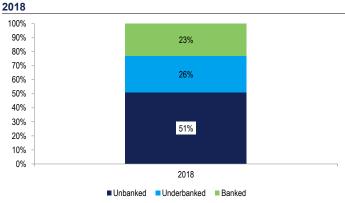

Bridging the unbanked population to the digital platform for a fee

AMRT's fee based income's nature of transactions has evolved from previously offering payments for motorcycle instalments, payment of electricity tokens, etc to the current portfolio that is more characterized by e-wallet top-ups including payment of online marketplace transactions, etc followed by utilities payment and motorcycle instalment payments. These services make up c.70-80% of the total fee-based income portfolio. Despite digital services being offered in numerous digital platforms (banks/online marketplaces), we believe that AMRT would continue to play a relevant role in bridging Indonesia's unbanked/underbanked population (as they account for 77% of the population based on Bein) to the digital platform (e-commerce, etc) (Fig 6).

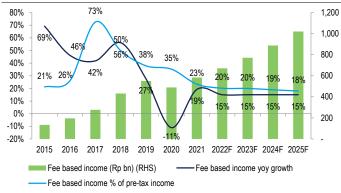

We project fee-based income to grow at CAGR of 15% for FY23-25F, similar to FY20-22 CAGR of 17% - driven by store expansion (average) of 8.0% in FY23F and 6.4% fee income growth per store (lower than fee income growth per store of 13.7% CAGR FY16-21 due to higher base effect). This shall boost earnings meaningfully as fee based income may account for 20% of FY23F pre-tax income. Additionally, digital service offering is also one of AMRT's traffic generators.

Initiate with HOLD due to valuation

AMRT is solidly positioned in the FMCG retail market as evidenced by its recent strong financial performance (Earnings CAGR of 57.7% FY20-22F). Nonetheless, we are forecasting a more conservative net profit growth outlook in FY23F of 15.9% yoy (vs FY21/22's 86.4/33.4% yoy). This is on the back of a more normalized SSSG of 5% in FY23F (in-line with inflation and company guidance), coupled with a more significant wage hike of 7.3% yoy in FY23F.

As such, we note that the significant EBIT margin expansion from FY20's 1.0% to 2.2/2.6% in FY21/22F (SSSG of 7.1/9.1% in FY21/22) is likely to be absent in FY23F as we expect a flattish EBIT margin at 2.6% due to SSSG deceleration and higher wage growth in FY23F. With these considerations, we initiate AMRT with a HOLD rating at a target price of Rp2,600, which is based on 35.1x FY23F P/E (+1 SD above 5Y average). Additionally, we also note AMRT is trading at a premium to regional minimarket peers (Fig 9) which may be justified through its stronger (top line and bottom line) growth outlook and higher ROE profile.

Fig. 8: AMRT is traded at 36.8x fwd. 12M PE (+1.2 s.d. from its 5Y avg. of 27.6x) well above its peers of 12.8 PE

Dupont analysis

In comparison with local retailers, AMRT is superior with an FY23F ROE of 26.0% to the other retailers (ex-LPPF) average of 12.9%. Among global FMCG retailers (including minimarkets), AMRT commands the highest ROE of 26.0% in FY23F with peers' average of 13.0%. This justifies our TP basis of +1SD deviation at 35x FY23F P/E, in our view.

Nonetheless, we note that AMRT's ROE improvement from FY17 5.9% to FY22F's 27.1% is largely driven by margin expansion, which we discussed earlier is a result of the significant operating leverage seen in FY21/22F.

Hence, we expect a flattish net margin outlook for FY23F given decelerating SSSG and higher opex growth (from wages) and that ROE improvement going forward may not be as significant as FY20-22's 12.0% ROE accretion.

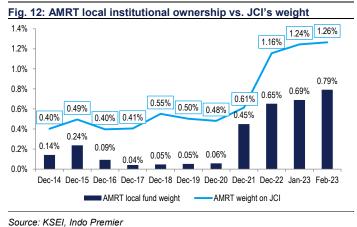

AMRT's other components in the dupont analysis are asset turnover and equity multiplier. Asset turnover remained stable ranging from 3.0 to 3.3 in FY17-21 and we expect this to be stable going forward, while equity multiplier has declined from 4.0 in FY17 to 3.0 in FY22F, primarily because AMRT paid off its outstanding debt at the holding level (AMRT turned net cash in FY19).

Industry Outlook

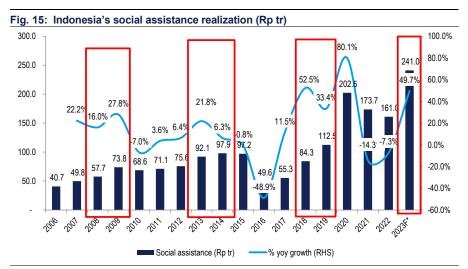

Domestic drivers for FY23F consumption Meaningful FY23F minimum wage hike to balance inflation

FY22 was a challenging year for consumers as inflationary pressure of 5.51% yoy was accompanied by wage growth of merely 1.6% yoy. Going into FY23F, our economist forecasts inflation to moderate to 4.45% from 5.51% and we believe FY23F national wage growth of 7.3% shall boost the Indonesian population's purchasing power.

Historically, AMRT's SSSG performance has a positive correlation with Indonesia's consumption expenditure. Looking into FY23F, our economist forecast Indo's consumption expenditure to reach 6.2% yoy growth (link to note). This along with indication that most FMCG companies pricing adjustments have largely been implemented in FY22, we forecast AMRT's SSSG at 5% in FY23F to be driven less by price contrary to FY22's primarily price driven SSSG growth of 9.1%. Another consumer tailwind is that the government tends to increase the social assistance at pre-election years and FY23F is no exception (Fig. 14).

Source: CEIC, Company, Indo Premier

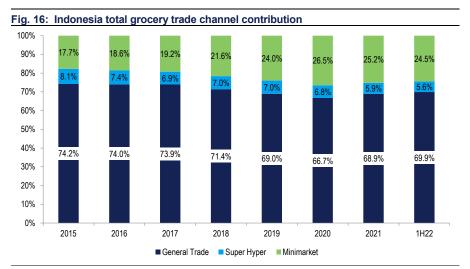

Source: CEIC, Indo Premier

*Budget

We also view the election campaign spending has the potential to boost domestic consumption as our economist estimates the election campaign spending to reach c.Rp366tr or 2.2% of GDP (Link to <u>note</u>). This is in-line with our economist's forecast of higher consumption expenditure growth in FY23F of 5.9% vs FY22's 4.9%.

Minimarket continues to gain market share

According to Nielsen, minimarket to total trade channel contribution market share has grown significantly from 17.7% in FY15 to 24.5% in 1H22 at the expense of GT and Super/Hypermarket (Fig. 16). This is also supported by Indonesia minimarket stores as total minimarket stores showed a robust growth from 25.1k stores in FY15 to 41.4k stores in 9M22, while combine total Hypermarket and Supermarket' stores declined from 742 stores in FY15 to 604 stores in 9M22. More importantly, this reflects the shift in consumers' preference in shopping at minimarket due to convenience and the preference to shop at a smaller quantities rather than bulk-purchase.

Business overview

One of the biggest minimarkets in Indonesia

According to Nielsen, AMRT's market share has remained resilient with a slight incline from 35.4% in FY15 to 36.2% in 1H22 (Fig. 19) within modern trade minimarket category. With the backdrop of rising minimarket to trade channel contribution (17.7% in FY15 to 24.5% in 1H22) (Fig. 16), AMRT is strongly positioned as one of the biggest FMCG retailers in Indonesia.

Source: Nielsen, Company, Indo Premier

Store format portfolio

AMRT is predominantly a FMCG chain retailer that also offers Ready-to-Drink (RTD), Ready-to-Eat (RTE), health and beauty related, and fruits & vegetables products to its customer through its other store format within the group. 9M22 Store count is mainly composed of Alfamart stores (c.17,500) followed by Alfamidi (c.2,100), with detailed store count in Fig 20.

In terms of margin profile, Alfamidi, Alfamidi Super and Dan+Dan provide slightly higher GPM, compared with Alfamart, Alfaexpress and Alfa X, due to product mix and higher number of SKU. In addition, Lawson's GPM profile is at c.30% as 70% of Lawson's sales is contributed by RTD & RTE (50% GPM).

As of 9M22, AMRT has 44 warehouses, 10 Depos and 12 Store Hubs to support AMRT's logistic needs and facilitate AMRT's c.20k stores across Indonesia in 9M22 (vs. c.15k stores in FY17).

Financials

Earnings growth outlook FY23F outlook

AMRT is expected to grow its top line/bottom line by +13.3/15.9% yoy in FY23F. Sales growth is based on 1,700 store openings in FY23F, along with a SSSG assumption of 5%, while FY23F net margins is expected to be similar in FY22F at 2.8% as slight expansion in gross margin of 27 bps is offset by higher opex/sales ratio that rose 20bps which is mainly attributed from higher wages growth in FY23F of 7.2% vs FY22's 1.6%.

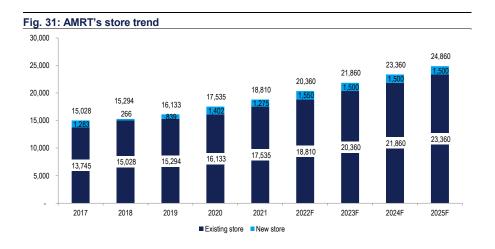

Source: Company, Indo Premier

Source: Company, Indo Premier

Sales

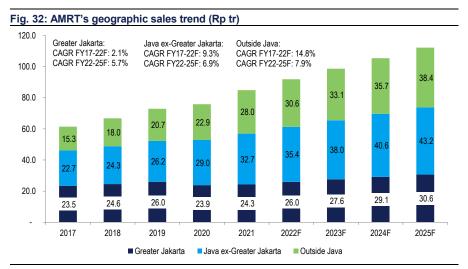

AMRT's top line is expected to grow 13.3% yoy in FY23F to reach Rp110.0tr. Sales growth would be driven by new openings of c.1,700 stores in FY23F vs. FY22's 1550 stores. FY23F store opening represent a 8.3% addition to AMRT's FY22 store count of c.20,400. Apart from Alfamart store additions of c.1000 stores in FY23F, its subsidiary MIDI would also focus on expanding its MIDI/Lawson's network by adding about 200/500 stores respectively.

AMRT's historical FY12-22F sales CAGR has grown by 13.6% with a store growth CAGR of 10.2% from 7,715 stores in FY12 to c.20,400 stores in FY22. Alfamarts account for the highest store count within AMRT group at 17,497 stores as of 9M22, followed by Alfamidi (2,103), Lawson's (107) and Dandan (269).

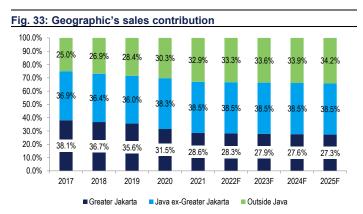

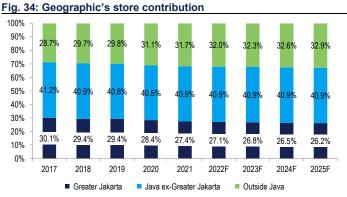

Seasonality wise, fasting and Lebaran quarters (falls in 2Q for the past 5 years) typically are the strongest quarter accounting for 27% of FY sales in FY17-21. Within the latter half of the year, 4Q is typically slightly stronger than 3Q.

Geographically, AMRT's growth has been driven by its outer islands stores which printed a FY17-22F CAGR of 14.8%, compared to Java (ex-Jakarta)/ Jakarta's CAGR of 9.3/2.1% respectively. We expect the trend to sustain as the group continues to tap into the under-penetrated outer island regions.

Gross profit

We expect AMRT to book a gross profit of Rp23.2tr in FY23F, with the assumption of slightly improving gross margin of 27bps yoy in FY23F. The margin expansion is in-line with management's guidance and is a result of the company's continuous optimization of product mix, enabled by AMRT's strong bargaining power (to suppliers) given its significant market share in the Indonesia's FMCG trade (68 categories).

Historically, AMRT's gross margin has displayed a gradual yet consistent improvement from FY15's 19.1% to FY22's 20.8%, implying about 23bps of annual improvement.

Worth noting that AMRT's gross margin tends to be lower during the fasting/Lebaran quarter because of promotional offering during the festive at an average of 18.9% vs non-Lebaran quarters of 20.5% in the past 5 years.

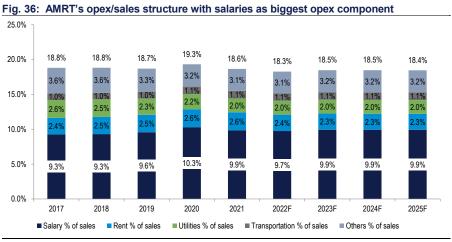

Source: Company, Indo Premier

Operating expense (opex)

We expect AMRT's total opex/sales ratio to slightly increase from FY22's 18.3% to 18.5% in FY23F, primarily due to a higher wage growth in FY23F at 7.2% yoy. Beyond FY23F, we expect a more gradual increase in opex/sales ratio, reaching 18.5% in FY24F, with normalizing wage growth assumption of 5% yoy – leading to overall opex/sales ratio of 18.5/18.4% in FY24/25F.

AMRT's largest opex item lies in salary and wages, which account for a total 9.9% of sales in FY23F (8.8/1.2% of sales from selling expenses/G&A expenses respectively) or 53.7% of total opex.

This is followed by rental expenses (including depreciation of right of use asset), forming 2.3% of sales in FY23F (12.6% of total opex). Other opex includes utilities/transportation/others which account for 2.0/1.1/3.2% of sales.

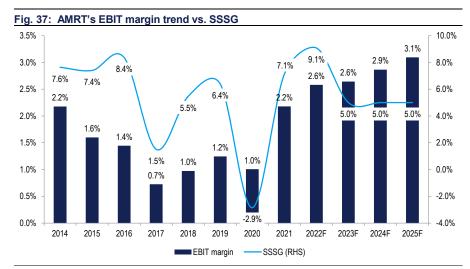

SSSG trends and its impact on EBIT margin

Historically, AMRT's EBIT margin tends to move in tandem with its SSSG trend (FY14-22F: 68% correlated). A case in point was when AMRT's opex/sales ratio declined from FY20's 19.3% to 18.6/18.3% on the back of strong SSSG of 7.1/9.1% in FY21/22F.

Hence, EBIT margin rose significantly from FY20's 1.0% to FY21/22F's 2.2/2.6%. Going forward, we forecast EBIT margin to expand moderately, reaching 2.6/2.9/3.1% in FY23/24/25F due to GPM expansion paired with flat opex/sales ratio.

Conversely, AMRT's EBIT margin declined in FY15 to 1.6% from FY14's 2.2% as opex/sales ratio jumped from FY14's 16.2% to 17.5% in FY15, leading to a -15.1/-13.0% yoy decline in EBIT/NPATMI in FY15. In FY17, another instance of EBIT margin compression arose due to opex growth of +14.8% yoy outpacing its sluggish sales/gross profit growth of +9.5/10.4% yoy on the back of 2.5% SSSG. As a result, EBIT margin declined from FY16's 1.4% to 0.7% in FY17.

Source: Company, Indo Premier

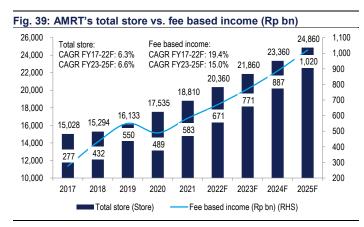

Given AMRT's net margin of 2.8% (FY23F), we note that every 10bps of margin improvement (or cost savings) would result in a meaningful 3.6% of earning accretion in FY23F. As SSSG expectation is in the mid-single digits (c.5%) level for the upcoming years (FY23-25F) vs 7.1/9.1% in FY21/22, coupled with more significant wage growth in FY23F, we do not see strong catalysts for AMRT's significant margin expansion going forward. We calculated AMRT SSSG's sensitivity to its net margin is also quite significant with every 1% point change in SSSG leading to 4.5% change in net profit or 10bps in net profit margin.

Fig. 38: AMRT's EPS/NPM/Opex% to sales sensitivity analysis as 5%SSSG is our base case

0000			SSSG		
	3.0%	4.0%	5.0%	6.0%	7.0%
EPS changes	-9.00%	-4.50%	0.00%	4.50%	9.00%
NPM changes	-0.20%	-0.10%	0.00%	0.10%	0.19%
Opex % to sales changes	0.26%	0.13%	0.00%	-0.13%	-0.25%

Other operating income (Fee-based income)

AMRT's fee based income has grown significantly to Rp583bn in FY21 with CAGR of 20.5% in FY17-21 and this was driven by 13.7% fee based income per store CAGR coupled with 5.8% store expansion CAGR. Worth highlighting that fee-based income flows directly into AMRT's pre-tax income. Looking into FY23-25F, we forecast fee-based income to grow at 15% to Rp771bn continuing the recent CAGR trend of 17% from FY20-22F. This would be driven by store expansion (average) of 8.0% in FY23F and fee-based income growth of 6.4% per store – lower than historical fee-based income growth per store of 13.7% in FY17-21) as we account for higher base effect.

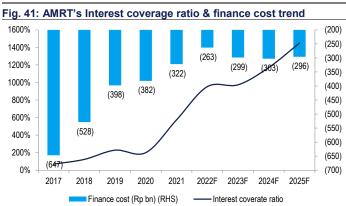

Source: Company, Indo Premier

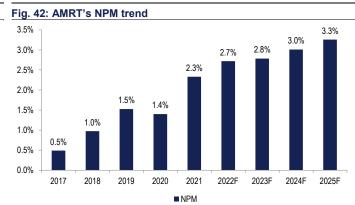

Source: Company, Indo Premier

Net profit margin (NPM)

As discussed, the operating leverage in FY21/22F translated to a significant net margin expansion from FY20's 1.3% to 2.3/2.7% in FY21/22F with a backdrop of continued gross margin gradual improvement. Apart from better EBIT margin, it's also worth highlighting that AMRT has turned into a net cash company since FY19 and its interest coverage ratio has improved from previously 69% in FY17 to 574/952% in FY21/22F. As a result, the deleveraging has improved AMRT's NPM as finance cost decreased significantly from Rp647bn in FY17 (vs. PBT of Rp381bn) to Rp263bn in FY22F (vs. PBT of Rp3.3tr).

Looking into FY23F, we expect NPM to be flat at 2.8% as GPM expansion of 27bps is offset by higher opex to sales of 20bps. Going forward, we forecast NPM to expand moderately, reaching 3.0/3.3% in FY24/25F due to GPM expansion paired with flat opex to sales ratio.

Source: Company, Indo Premier

4Q22F preview

For 4Q22F, we expect AMRT to book a strong top line growth of 14.8% yoy and 2.9% qoq. In terms of earnings, we expect 4Q22F GPM to be stronger than 9M22 due to less promotional offers similar to 4Q21.

Noting that there was a one-off expense reduction in 4Q21 pertaining to the Omnibus law regarding post-employment benefits, we expect 4Q22's opex/sales ratio to be to be higher by 56bps yoy. In sum, we expect 4Q22 net profit to book +19.6% yoy/+78.6% qoq growth (slower than 9M22's 41.8% yoy growth) due to the one-off expense reduction in 4Q21.

Balance Sheet

AMRT's gearing ratio has consistently improved from FY17's 125.0% to FY21's 15.4%. It reached net cash in FY19 with net gearing of -23.7% from FY18's 32.2%. As of 2021, AMRT has fully repaid all outstanding debt at the holding level including the Rp1tr zero coupon bond issued by JD (repaid in Aug21).

Given AMRT's strong cash flow generation ability with FY21/22F EBITDA at Rp5.0/5.9tr, we expect AMRT's internal cash flow to be sufficient in funding future expansion plan (capex expected to be Rp3.3/3.0tr in FY23/24F Capex would primarily be utilized for further store expansion (1700 stores including 250 store-in-store Lawson's each year for FY23/24F) and the construction of 3 warehouse/distribution centres for MIDI in FY23F.

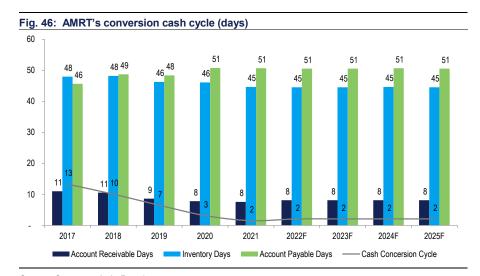

Source: Company, Indo Premier

Source: Company, Indo Premier

Cash Conversion Cycle

In terms of working capital management, AMRT cash conversion cycle stood at 6.5/3.2/1.5/4.9 days as of FY19/20/21/9M22. AMRT's 5Y-average receivable days of 9.1, represents mostly receivables from franchisees, while inventory days/payable days are quite balanced at 46.6/48.8 days respectively. This implies that working capital requirement for store expansion is light and store expansion capex pertains mostly to prepaid rental and store fit outs expenses.

Source: Company, Indo Premier

Comparison with Indomaret

Relative to Indomaret, we note that both companies registered the same historical trend with AMRT/Indomaret's sales CAGR of 8.6/8.9% and net profit CAGR of 26.9/21.9% for FY16-21. In terms of NPM, both companies also recorded roughly the same levels of NPM.

AMRT provides better ROE of 27.2% in FY21 compared with Indomaret's at 14.1%. This was driven by better sales coupled with equity multiplier.

Planned corporate action at subsidiary level (MIDI)

AMRT's 89.4% owned subsidiary, PT Midi Utama Indonesia Tbk (MIDI) has conducted a 1:10 (old:new) stock split effectively on 06Mar23. Subsequently, MIDI plans to conduct a pre-emptive rights issue with new shares that will increase its free float from 10.6% currently to c.23% (noting that AMRT is not going to exercise its rights), with potential proceeds of >Rp1tr to help fund MIDI's expansion plans (200 MIDI stores, 500 Lawson's stores and 3 warehouses/DCs).

The financial impact from c.14% dilution after the corporate action to AMRT is not very material as MIDI contributes 13.0/16.1% of AMRT's FY21/9M22's net income. MIDI's expansion plan has been incorporated to AMRT's group's overall expansion targets as discussed above.

MIDI continues to be one of AMRT's top-line growth drivers (FY17-21: MIDI/AMRT at 8.6/8.4% CAGR) with its aggressive store expansion targets. Specifically for Lawson's stores, out of its 500 store expansion half of which would be store-in-store within MIDI stores with the rest as Lawson standalone stores.

On the earnings growth side, MIDI's FY17-21 CAGR of 27.3% is still lower than AMRT's 60.2% within the same period. We view that AMRT is more scalable than MIDI as AMRT targets the whole spectrum of consumers (mass market to middle-upper income class) vs. MIDI's (including Lawson) slightly more premium target market.

We are not fully convinced on the outlook of aggressive Lawson stores rollout as it would compete against lower priced food and beverage offering by the MSME minimarkets/food stalls; and would continue to monitor its progress. Potential drawbacks from the aggressive Lawson rollout include significant opex (particularly wages) growth including those that are located within Midi's stores.

Fig. 48: MIDI financial highlight

Risks

Increasing quick commerce adoption

The service offerings provided by quick commerce players (mostly in the urban cities) provide consumers a convenient option to shop for their everyday basic needs, delivered to their doorstep. With further scale ups, they may prove to be a threat to minimarkets in the medium to long term especially in urban areas. Unlike the duopoly structure of the minimarket industry, the competitive dynamics of quick commerce is more fragmented and quick commerce players collaborate not only with minimarket operators such as AMRT, but also with supermarkets and hypermarkets. Based on a recent survey conducted by Populix involving 1,046 respondents, 87% indicated that they are active users of quick commerce application.

Accelerating financial inclusion (Fee base income risk)

As discussed, AMRT currently plays a relevant role in bridging e-commerce/digital platform to the underbanked/unbanked population through its extensive store network nationwide. Accelerated financial inclusion for the mass market means that they would have the option to transact digital services at the convenience of their device and has the potential to render AMRT's role to be less relevant for their fee based income services. Nonetheless, we do not see this risk to be a major concern in the short to medium term.

Offline competition on digital services provider (Fee base income risk)

The likes of BRILink and MitraBukalapak offer multiple digital services through their extensive physical network (Fig 51 & 52). BRI Link continues to grow rapidly from 503k agents in FY21 to 627k agents in FY22 for BRI Link (+25% yoy), while registered mitras for Bukalapak grew 46.2% yoy to 15.2mn as of Sep22. These networks naturally compete with AMRT in fee base digital services offering.

Thin margin may be prone to negative sales disruption/cost surprise

AMRT's net margin stood at 2.3/2.4% in 9M21/FY21 and we note that disruption to sales may have a detrimental effect on bottom line, the effect of which is exacerbated by negative operating leverage. This was evidenced in FY15 and FY17 (discussed earlier under 'EBIT margin') whereby net profit declined -13.0% and -50.1% respectively.

Company background

Company shareholder structure

PT Sumber Alfaria Trijaya, Tbk (AMRT) was established when its founder Djoko Susanto started a trading and distribution business in 1989. However, in 1999 this business was transformed into a minimarket business. In terms of ownership, PT Sigmantara Alfindo, which is owned by Djoko Susanto, is the largest shareholder with 53.19% ownership.
