Aug25 survey: tangible market repair efforts observed

- Our Aug25 survey results indicate further tangible changes in market repair efforts by the three players, each with different approaches.
- Furthermore, our on-the-ground survey suggests that the availability of pre-registered starter packages with low data yield has further declined.
- We believe that market repair efforts, combined with improved purchasing power, may result in a better ARPU outlook.

TSEL: more significant changes in package offering

In the Aug25 survey, TSEL made further changes to its offerings by reducing the number of packages in the “Ketengan” and “OMG” categories to 4 (vs. 28 previously) and 16 (vs. 39 previously), respectively. Meanwhile, it added “Internet” package offerings, increasing them to 72 (from 69 previously). The “Ketengan” offering was fully removed in SIM card with >Rp50k monthly spending, while the average price in SIM card with <Rp50k monthly spending increased by 33%. The average price of “Internet” packages declined by 11% in SIM card with >Rp50k monthly spending, but increased by 5% in SIM card with <Rp50k monthly spending. The average price of “OMG” packages declined by 11% in SIM card with >Rp50k monthly spending, but increased by 6% in SIM card with <Rp50k monthly spending (Figs 1–4). Previously, in Jul25, TSEL made significant [changes to its “Super Seru” packages](#) which remained unchanged in Aug25. It introduced “Internet” package offerings in TSEL Lite SIM card, generally introducing more packages with shorter validity periods, encouraging higher ARPU.

EXCL: shorter monthly validity period and lower discount offerings

In the Aug25 survey, XL shortened the validity period of some monthly packages to 28 days (from 30 days previously) for both SIM cards with spending <Rp50k and >Rp50k—namely Akrab and Xtra Combo Regular packages. This implies a c.7% potential ARPU uplift for customers using these monthly packages (see [Fig 10](#) for simulation). Furthermore, XL also reduced promotional discounts for Akrab packages in SIM cards with <Rp50k monthly spending, resulting in a c.67% mom increase in promotional package prices ([Fig 9](#)). Meanwhile, FREN’s offerings in Aug25 remained unchanged compared to Jul25.

ISAT: adding new packages to fill the quota gap

During the 2Q25 earnings call, ISAT mentioned that it had increased the price of its cheapest reload packages by 10%, effective end-Jun25. However, in our Jul25–Aug25 surveys, we have yet to observe this trend across both SIM card categories (<Rp50k and >Rp50k). In our Aug25 survey, we observed that ISAT added new “Freedom” packages to fill the quota offering gap with lower data yield (see [Fig 11](#)), which could technically lead to higher ARPU if consumers shift to these offerings. Meanwhile, it kept existing package prices unchanged.

Further declining pre-registered starter packs with low data yield

In Aug25, the availability of pre-registered starter packs further declined—especially for ISAT and EXCL, based on our survey. On a more positive note, the data yield of the remaining pre-registered starter packs available in the market is now mostly higher than that of reload packages. Hence, this should result in significantly fewer users abusing pre-registered SIM cards or becoming low-value customers.
